

The Traffic Lights

RED — AI-FREE

This is you, unassisted. No AI at any stage.

YELLOW — AI-ASSISTED

AI can help; you drive. Use it only as the assignment states — and disclose it.

GREEN — AI-ENCOURAGED

Using the tool well IS the skill. Direct it, evaluate it, document it.

Every assignment shows its color. When in doubt — ask first. Asking is always safe.

The Six Things Every Student Must Understand

1. AI predicts from patterns. It does not understand like a human.
2. AI can produce persuasive but false information. It doesn't know when it's wrong — that's your job.
3. Bias can live in the training data and the design. Outputs inherit their inputs.
4. What goes into AI may not come back out. Treat every prompt like a postcard.
5. The human is responsible. Always.
6. AI is not a person — and it's not the person to tell. When it really matters, tell a human who can help.

Cite • Disclose • Verify • Own

Cite what you quote.

Disclose what helped.

Verify what AI mentions.

Own what you submit.

Before you submit: Did I check it? Did I disclose it? Can I explain it?

Pause • Trace • Compare • Check • Disclose

Before you believe it, share it, or react to it:

PAUSE — strong feelings are the signal to slow down.

TRACE — where did this actually come from?

COMPARE — is anyone credible reporting it independently?

CHECK — dates, quotes, citations, hands, text, audio, backgrounds.

DISCLOSE — when you generate or alter something, say so.

The Five-Step Review

Accuracy → Alignment → Appropriateness → Accessibility → Final Teacher Judgment

AI drafts. You decide.

Nothing reaches a student without your name on the decision.

Redesign One Assignment

1. Name what it actually measures.
2. Ask where that skill becomes visible.
3. Pick one or two moves: process · local & personal · performance · in the room.
4. Assign the light — and the disclosure requirement.
5. Rebalance the rubric toward visible thinking.
6. Tell students why.

The Career Conversation

1. List ten tasks that job actually involves.
2. Which could AI help with or handle within ten years?
3. Which tasks need a human — and why?
4. So what would the human spend more time on?
5. What would you want to be better at than the machine?
